

DAAP “Framing” CD Instructions

Burning a CD

- ◆ First use good cd-r stock. Taiyo Yuden or TDK cd-r’s recommended
- ◆ When burning a CD use the slowest burning speed (4x) with only 1 second between tracks. The DAAP tracks are set at 2 seconds before the music plays and 2 seconds after the music ends, to differentiate the DAAP audio prints.

Graphics

- ◆ Next the graphics. Go to the zipped folder of tracks and select the “Album Cover DAAP” pdf for your album. Follow the directions, and print it out on a local printer. “Cut along dotted lines”, etc.
- ◆ Do the same for TRACK LIST INSERT, and DAAP AUTHENTICITY.

Jewel Case

- ◆ Jewel case. Try to secure a full size jewel case. Place the album cover inside the front panel of the jewel case, and the TRACK LIST, behind it, also in the front panel.
- ◆ Place the finished CD in the CD tray of the jewel case.
- ◆ Place the DAAP Authenticity sheet on top of the CD in the jewel case.
- ◆ Done! Your Digital Audio Artist Prints “framed”.
